

Take this quick and easy **SELF-SCREENING QUIZ**

Please check all boxes that apply.

- When you are in a group or in a crowded restaurant, is it difficult for you to follow the conversation?
- Does it sound like people mumble?
- Do you often need to turn up the volume on your TV?
- Is talking on the phone difficult?
- Do you have difficulty understanding women and children?
- Has someone close to you mentioned you might have a problem with your hearing?
- Do you ask people to repeat themselves often?

How did you do?

If you answered "yes" to any of these questions or are experiencing hearing difficulties, it is highly recommended you see one of our experienced audiologists for an accurate diagnosis and evaluation of treatment options.

About the UI Audiology Clinic

The clinic educates and trains Doctor of Audiology students to provide clinical diagnostic, consultative and treatment services for individuals with communicative issues. The clinic accomplishes this mission through teaching, research and community service.

The Speech & Hearing Science department is accredited by the Council of Academic Accreditation of the American Speech-Language-Hearing Association (ASHA). Graduate doctor of audiology students provide clinical services while audiologists certified by ASHA and licensed by the State of Illinois supervise them.

OUR VISION

To be recognized as one of the leading facilities in the community that provides services to individuals with communicative impairments, and to improve the quality of their lives throughout their lifespan.

Benefits of Treating Hearing Loss

Since untreated hearing loss is linked to many negative health consequences in both children and adults, it is not surprising that treating hearing loss has the opposite effect.

Hearing aid users of all ages report significant improvements in many key areas of their lives. A study of 4000 people conducted by the National Council on Aging found hearing aid users reported improvements in the following areas:¹

-  **Relationships at home (56%)**
-  **Feelings about self (50%)**
-  **Overall quality of life (48%)**
-  **Relationships with children/ grandchildren (40%)**
-  **Self-confidence (39%)**
-  **Mental health (36%)**
-  **Sense of safety (34%)**
-  **Social life (34%)**
-  **Relationships at work (26%)**

The families of hearing aid users are even more cognizant of the positive changes associated with hearing loss treatment and tended to report even greater improvements across the board.

Contact us today to learn how a hearing loss treatment plan can improve more than just your ability to hear; it can improve your quality of life.
